About us

Nelson Neurophysiology has been providing a range of Neurophysiology services to the Nelson and surrounding areas since early in 2006. The sole practitioner is Owen English, a NZ-born Neurotechnologist who trained and spent 28 years in the UK before returning to NZ in 2001. During his time there, Owen trained in Neurophysiology within the NHS Public Hospital system and worked to the position of Principal Neurotechnologist at the [Norfolk & Norwich Hospital in East Anglia](#).

The practice itself is a dedicated laboratory building with double-cavity walls and heavy duty soundproofing. Air-conditioning maintains a constant 21°C temperature (essential to prevent sweat related electrode artifact) and a negative pressure system maintain a vacuum of 25-30 pascals. A robust system of emergency backup power supplies to maintain a reliable and high quality mains source is also in place.

Professional standards are entirely based upon the current UK Standards.

Referrals are accepted from NZ-registered Medical Practitioners, GP's and Specialists who are all most welcome to visit the practice.
